## **DETAILED ACTION**

## Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 1-13 are rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent No. 6,081,900 to Subramaniam et al.

As concerns claim 1, a method for tunneling (column 11, line 30) non-hypertext transfer protocol (HTTP) data streams through a reverse proxy, the method comprising the steps of: soliciting a secured connection with a reverse proxy protecting a back-end server computing device (figures 1 and 2); establishing a connection with said back-end server computing device via said reverse proxy through said solicitation (figures 1 and 2); and, responsive to establishing said connection, maintaining said connection and exchanging non-HTTP data over said secured connection without encapsulating said non-HTTP data within HTTP messages (figures 1 and 2); column 3 lines 40-50).

As concerns claim 2, the method of claim 1, wherein said soliciting step comprises the step of requesting a secured sockets layer (SSL) connection with said reverse proxy (column 3, line 25).

As concerns claims 3 and 11, wherein said requesting step comprises the steps of acquiring an address for said reverse proxy and a port for establishing an SSL connection with

said reverse proxy (inherent when communicating to acquire an address and port); further acquiring an address for said back-end server computing device and a port for establishing an SSL connection with said back-end server computing device (inherent when communicating to acquire an address and port); formulating an HTTP-CONNECT message using said acquired addresses and ports; and, writing said formulated HTTP-CONNECT message to said reverse proxy (figures 1 and 2).

As concerns claims 4 and 12, wherein said exchanging step comprises the steps of: formatting a buffer with real-time data; and, writing said buffer to said secured connection (column 3, lines 51-52).

As concerns claims 5 and 13, further comprising the step of performing authentication in said reverse proxy as a condition of establishing said secured connection (column 8, lines 40-41).

As concerns claim 6, a system for tunneling non-hypertext transfer protocol (HTTP) data streams through a reverse proxy, the system comprising: a reverse proxy disposed between a client computing device (column 3, line 15) and a server (column 3, lines 14-15) computing device in a computer communications network; an authentication process configured for operation in conjunction with said reverse proxy (figures 1 and 2, column 8, lines 40-41); a communications socket established between said reverse proxy and said client computing device (figures 1 and 2); and, a non-HTTP data handler coupled to said secured communications socket and programmed to write non-HTTP data to said reverse proxy without encapsulating said non-HTTP data within HTTP messages (figures 1 and 2; column 3, lines 40-50).

Art Unit: 2151

As concerns claim 7, the system of claim 6, wherein server computing device is a real-time streaming media server, said non-HTTP data handler is a real-time streaming media client, and said non-HTTP data is real-time streaming media (column 5, lines 43-49).

As concerns claim 8, the system of claim 6, wherein said communications socket is a secured sockets layer (SSL) communications link (column 3, line 25).

As concerns claim 9, a machine readable storage having stored thereon a computer program for tunneling non-hypertext transfer protocol (HTTP) data streams through a reverse proxy, the computer program comprising a routine set of instructions for causing the machine to perform the steps of: soliciting a secured connection with a reverse proxy protecting a back-end server computing device (figures 1 and 2); establishing a connection with said back-end server computing device via said reverse proxy through said solicitation (figures 1 and 2); and, responsive to establishing said connection, maintaining said connection and exchanging non-HTTP data over said secured connection without encapsulating said non-HTTP data within HTTP messages (figures 1 and 2, column 3, lines 40-50).

As concerns claim 10, the machine readable storage of claim 9, wherein said soliciting step comprises the step of requesting a secured sockets layer (SSL) connection with said reverse proxy (column 3, line 25).
